

VISTATRAK

GET YOUR PROJECTS BACK ON TRACK

In numerous industries along the E&C value chain, whether its oil and gas, chemicals, manufacturing, energy, government, engineering and construction or infrastructure, organizations are modernizing applications and reimagining operations to take advantage of new data-driven technologies for efficient and effective project management.

When data aggregation succeeds, the results are impressive: The VistaTRAK® Project Tracking and Reporting Service allows you to keep tabs on key performance metrics—such as cost and schedule performance, earned value, productivity and more—so you can make more informed decisions about how your company should operate or diversify resources to more effectively address project pain points. HGA’s objective is to facilitate a decision-making process that delivers high-quality programs that are technically and environmentally sound, affordable, and completed on schedule.

Data integration is at the heart of VistaTRAK. In a single comprehensive solution, VistaTRAK provides the critical integration of data, data connection, data storage, and delivers visual dashboards for greater management visibility, so you can accomplish project goals and deliver solutions to workflow woes.

Here are just a handful of the practical and tangible benefits available through our patented project tracking and reporting system and HGA’s various service offerings:

Greater management visibility

The user-friendly interface of VistaTRAK includes various reporting dashboards so you can identify a plethora of KPIs in real-time, such as risks, key metrics, costs, resources, and work progress. The cloud-based system offers reporting dashboards, as well as tools for earned value analysis, forecasting/trends, detailed scheduling, and risk/change management and control. VistaTRAK also includes a formalized, automated workflow process in M-Files for submitting, routing, approving, tracking and collaboration boards for teams to work more efficiently.

The benefits of our decision support system include greater management visibility, improved decision making, and increased accountability. It is the only system in the country proven to manage, track, and report effectively while providing the most value for program implementation.

- Empower real-time forecasting** – Facilitate real-time information and decision-making across the project lifecycle.
- Ensure alignment of project strategies** – Provide better data that feeds project processes to lead to improved project performance.
- Improve project transparency** – Improve resource collaboration to bring your cross-functional teams together to meet project deliverables.

Increased return on investment

Seamlessly connect applications, data, and people for greater management visibility to project optimization and more, HGA’s solution helps clients make informed decisions – more quickly and accurately than ever before.

Improve data alignment – Realize an immediate return on investment for your project progress by analyzing the flow of physical, financial and service items.

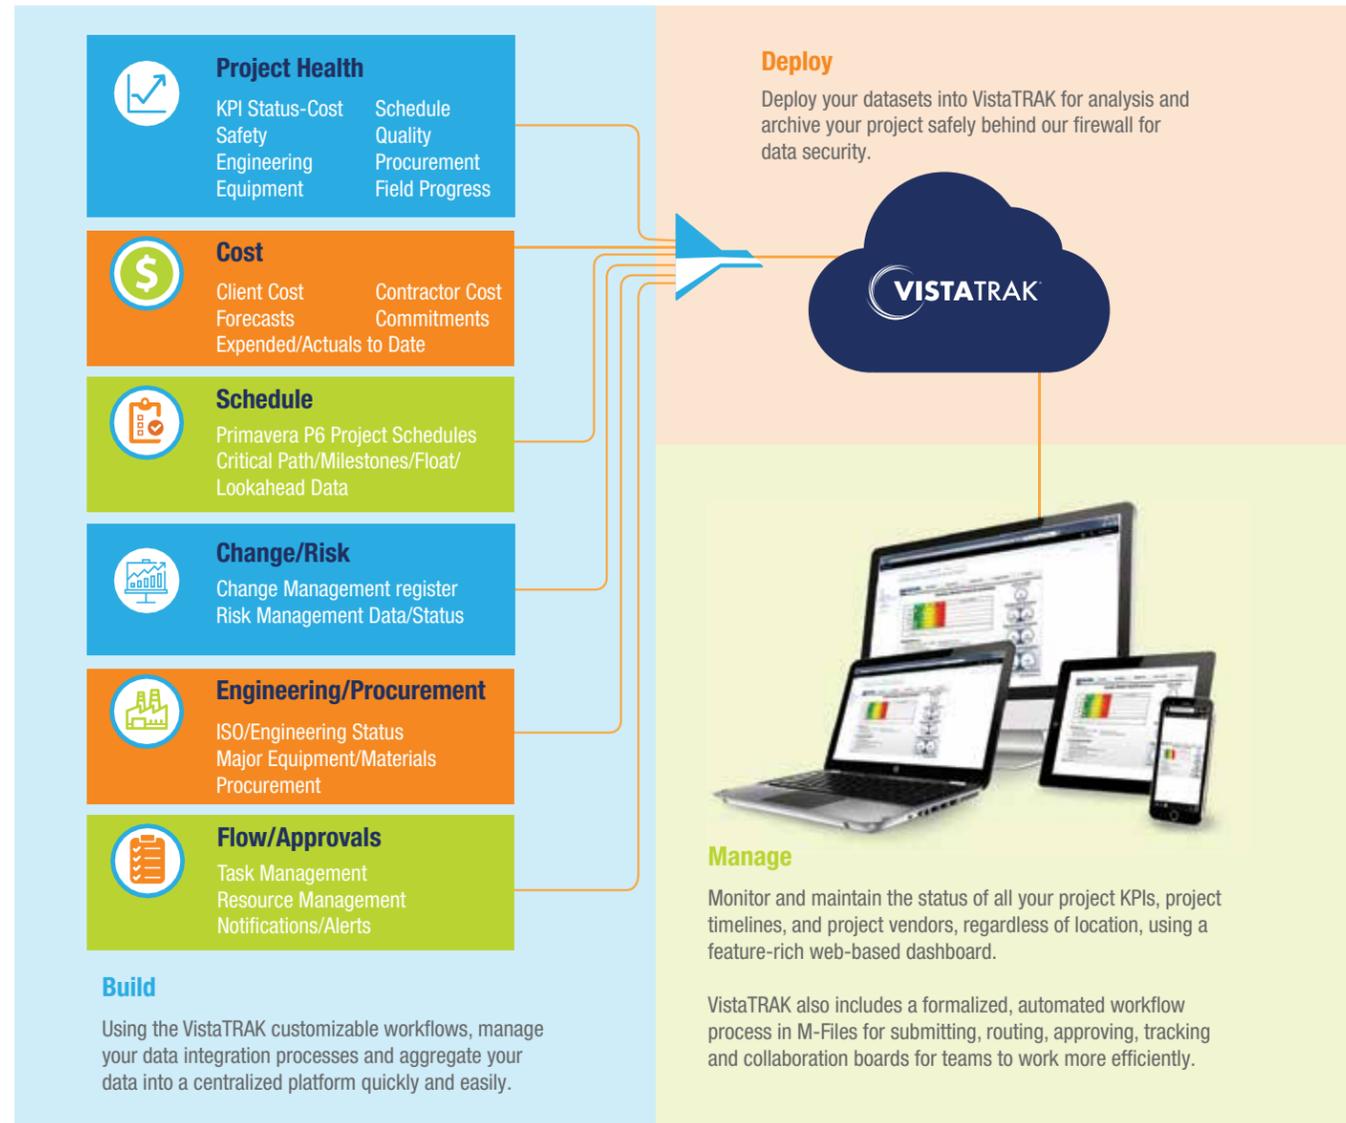

Lower total cost of ownership – Avoid the time, expense and headache of purchasing multiple data products for project management.

Improved project efficiency – Break down data silos and combine data from multiple functions through VistaTRAK and gain 360-degree visibility across project progress.

VistaTRAK ensures that your project receives the cost and project execution benefits of the following:

- Intuitive interface provides greater management visibility
 - Trend analysis
 - Current progress
- Team sharing feature ensures timely interaction for improved decision making
 - Increases R.O.I
 - Mitigates critical risks
- Standard web browser access ensures accountability and communication
- Tower platform supports one-stop source for all progress tracking and reporting
- Configurable screens enables customizable interface
- Storage feature ensures all documentation resides in one location
- Canned reporting and data extract capability

Safely store archived material

Some of your information needs to be maintained for financial reporting or verification purposes. The web-based system uses either server-based cloud data access so documents, meeting minutes and important reminders can be called up seamlessly. HGA's VistaTRAK decision support solution includes a document repository and meeting space for project stakeholders. As part of VistaTRAK, our data storage solution will help manage and collaborate all required documentation into one online, central location. Through this solution, project stakeholders can collect and archive required documentation, participate in team discussions, view important announcements, and share team calendars anytime and anywhere from any computer or hand-held device. We already have the tools in place to easily customize the system for your project needs. Websites for our past projects have been recognized at state and federal levels for their innovation and accessibility, and our methods are quickly setting a new industry standard. HGA's VistaTRAK decision

support solution was cited as a finding of merit by the Department of Housing and Urban Development (HUD) in the overall management and monitoring of the LA Hurricanes Katrina/Rita CDBG Disaster Recovery Program.

Control and govern data access – Establish role-based security and restrict data access.

Management of documents – Upload and manage all documents from VistaTRAK to quickly find, configure and access information for the project.

Intelligent Document Control – Meta Data, Version Control and Custom Workflows – HGA's VistaTRAK decision support solution combines benefits from SharePoint technology to utilizing integrated and customized M-Files storage, tracking, and document control. Our service can help manage business-critical documents and information from any device no matter where it's stored. Integrating automatic

workflows, this allows better control for all stakeholders to work more productively than ever before.

Ensure maximum performance – Centralized data management provides visibility and control to manage and track project progress and performance. VistaTRAK makes it easy to see the entire project picture so that nothing falls through the cracks.

Aggregates and analyzes large datasets

VistaTRAK is designed to make importing easier so you can seamlessly bring data together for faster, better, more robust visibility into the status of a project. The service can rapidly combine multiple datasets, accommodate format variability and enables you to accelerate the analysis of your operation for optimal decision-making plans.

Our team of developers has the broad skills required to manage the development of the data structures and standards required to correctly interpret, connect, and load 3rd party data into VistaTRAK. They have intimate knowledge of the integration requirements of 3rd party data sources into the central hub. VistaTRAK offers pre-built workflows to connect and harmonize 3rd party data sources for the fastest and lowest risk implementation. With easy, scalable and supported connection solutions from the VistaTRAK developers, there's no reason to build it yourself.

VistaTRAK gives you a rich understanding of your operation by quickly generating detailed reports and accelerates analysis by managing documents in one secure, easy-to-access interactive dashboard.

Integrate all your vendor data – Aggregates all project transactions into a powerful, central system, allowing you to achieve full project transparency and gain major strategic advantages.

Improve project productivity – VistaTRAK enables the fastest, lowest cost and lowest risk integration of 3rd party data into the central hub by streamlining key aspects of the data integration process.

Tailor to your needs – Templates and process workflows allow your organization to successfully connect all your vendor datasets.

Rapid technology integration – Quickly integrate vendor data into VistaTRAK, virtually eliminating data errors and reducing setup time from months to weeks.

Highly scalable

VistaTRAK offers a flexible cloud-based platform to overcome system complexity and integrate any applications and data sources across our system with speed and ease. The unique connectivity capabilities empower project teams with multiple data sources to aggregate data from any data source for better business decisions.

Accelerate workflow implementation – Rapidly build and deploy workflows without extensive coding.

Create scalable, reliable experiences – Increase process adoption by providing easy-to-use workflows that adapt to any project.

Industry connectivity – Accelerates the consolidation, initial load for a full range of 3rd-party datasets.

Deliver seamless customer and partner experiences – Share composite aggregated field data from multiple applications and data sources.

Manage your document flow and approvals

VistaTRAK is the streamlined, integrated project management platform that you've always wanted. Easy-to-use, automated workflow process in M-Files - VistaTRAK lets you submit, route, track and collaborate more efficiently. By combining the key needs of project planning, tracking, and collaboration in one platform, and then making it easy to assign work, track progress and see budgets in real-time, VistaTRAK makes it easy to manage all of your project work in one place.

Offers automated document approval system – Streamline your entire project flow and approval process so your team can see everything in one place and meet deadlines more consistently.

Improve project collaboration – Simplify your project planning with real-time dashboard access to view, plan, and automate routine tasks to improve processes and communication.

Accelerate workflow implementation – VistaTRAK automatically keeps up with your project workflow timelines, to simplify processes, and ensure your project outcome.

To succeed at project data integration, organizations must take control of data. They must connect disparate data sources, enforce data integration and data storage, and deliver visual dashboards for real-time data decision-making, operational support, and ensure that projects come in on time and within budget. Perhaps the best evidence in the VistaTRAK solution is the trust placed in our service by increasingly complex and expensive project managers in markets as varied as oil and gas, chemicals, manufacturing, energy, government, infrastructure, engineering and construction.

In a scalable, cloud-based solution, VistaTRAK provides the critical data integration, data storage, performance management and visualization capabilities that project managers/owners need for overcoming difficulties compiling and sharing project information and achieving their project goals to improve costs, timelines, and efficiency.
